Inventory Synchronization Workshop

CMS Montera provides Consulting and Software to help clients solve problems in Operations and the Supply Chain

CMS RoadRunner.

Increase your Sales by Lowering your Inventory!

Traditional purchasing and inventory management is increasing your costs ...

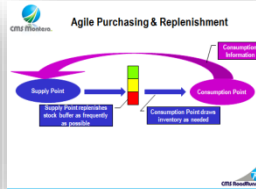

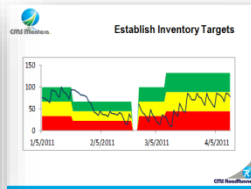

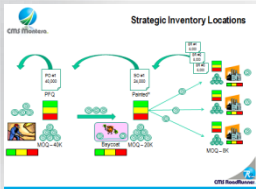

- Most companies have too much inventory with too many stock outs
- Purchasing's strong focus on unit cost often reinforces this problem
- Improving forecast accuracy is usually a futile and costly endeavour
- Inventory management has not significantly changed in almost 40 years

Demand Driven Replenishment ensures ...

- Replenishment lead times are dramatically reduced
- Buy, Make and Ship decisions are based on consumption vs. forecast (Pull vs. Push)
- These decisions provide protection against variability in supply and demand

Therefore, in order to maximize sales and minimize costs ...

- Hold inventory where there is still choice of what it will become or where it will go
- Establish inventory targets to cover what is needed before more reliably arrives
- Buy what you used, make what you shipped, ship what you sold

Who Should Attend

Executives, Plant and Operations Managers, Supply Chain Managers, Materials and Purchasing Managers

Workshop Format

This 1 day workshop is a mix of exercises, presentation & case studies

website: www.cmsmontera.com
email: info@cmsmontera.com

Attend CMS Montera's Inventory Synchronization Workshop

- Learn** how to reduce replenishment time in order to increase forecast accuracy
- Experience** the process of setting strategic inventory locations and dynamic targets
- Discover** how to implement Demand Driven Replenishment

"This does not replace what I have learned, instead complements, and in some cases explains why there are problems that could not be resolved with other approaches."

Tom Hayes, General Manager
ATS Automation Tooling Systems Inc.
